

Press Release

ST Suspensions Anti-sway bar kits for the 2016+ Mazda MX-5

All new dynamics for an all new MX-5

Clovis, CA (USA), May 11th, 2016 – The next generation Mazda MX-5 brings an all new design to one of the most legendary roadster franchises in history. This fourth generation MX-5 was built to the ideal specs by the engineers at Mazda whose singular focus was to produce a lightweight, sporty, short wheelbase front engine rear wheel drive roadster that would tug at the heartstrings of true enthusiasts. While this alone was reason for MX-5 fans to rejoice, ST Suspensions has taken things one step further, now offering an upgraded anti-sway bar set to increase their driving dynamics even further. The ST anti-sway bars, engineered by KW, allows you to further increase the handling and excellent road holding characteristics of the all new MX-5.

As an upgrade to the standard equipment, ST Suspensions now offers a complete set of anti-sway bars for 2016+ Mazda MX-5. The front anti-sway bar was redesigned and increased to a hollow 1 1/8th inch bar with three holes for fine tuning the vehicles balance and driving characteristics. The rear bar was increased to a solid 1 1/16 inch bar which also has three holes of adjustment. Manufactured in-house at ST Suspensions' Clovis, CA facility these anti-sway bar kits feature a final black metallic powder coated finish for long lasting use on the road. Each kit includes upgraded composite sway bar pivot bushings and brackets to complete the package. Once fitted, the ST anti-sway bars greatly improve road handling during rapid load changes and hard cornering by reducing the load difference between the inside and outside wheels. The steering behavior is a lot more direct allowing a sportier and more agile driving style

About KW automotive:

KW automotive is market leader and innovator of individual suspension solutions for the street and racing applications. Sporty drivers rely on KW coilover kits with its three street damping variants, as well as on the Nürburgring Nordschleife tested KW Clubsport coilover kits, which are street legal and have a technical component report. Worldwide successful racing teams trust in the patented valve technology of KW Competition, the six-time overall winner of the 24-hour-race Nürburgring and winner of the ADAC GT Masters 2011. With its large portfolio of suspension kits, modern production technology, development- and test center, for more than 15 years KW has been succeeding in markets around the world. The delivery program of ST suspensions with springs, sport dampers, sport suspensions, coilover kits, wheel spacers and anti-sway bars combines leading KW technology for the street with the best price-performance-ratio. www.stsuspensions.com
